

FS163H WIRELESS GLASS BREAKING DETECTOR

The FS156H/FS163H is compatible with all normal closed wire type detectors such as glass breaking sensors or carbon monoxide/smoke detectors. Connecting a wire type detector or sensor to an FS156H/FS163H universal transmitter offers the advantage of reducing any necessary wiring to only a few inches making the detector "almost wireless". The FS156H/FS163H can be operated in 24HR mode, Home mode and Away mode to protect your house at any time and in any condition.

FS156H/FS163H is the superior "shopping code version" of the universal transmitter so it has no dip switch's to set making installation even faster & easier and is able to accept over 1,000,000 different system code combinations.

FS163H - FEATURES

- Easy to install on the wall or window

FS163H - SPECIFICATIONS

- Typical (normally closed) 7 Ohm max.
- Alarm (open) 1M Ohm min.
- Time open on alarm 1-10 seconds min.
- Max loop voltage 15V.
- Max loops current 70mA.
- Dimensions: 38L x 22W x 11H (mm), Weight: 20g
